

Document Title: Urban SDK Bug Report

Reported By: Benjamin QA

Starting Date: 14th July 2026

End Date: 12th September 2026

Environment Tested: Chrome / Firefox and Safari

Bug #1

1.1. Title: Release 2.6.7 - Settings - Speed Limit Integration Stuck in "Error" State; Delete Action Fails with Generic Error

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: The "Speed Limit Integration" for "area-145805" shows a persistent "Error" status under Manage Integrations. When the user attempts to delete the errored integration using the trash icon, the action fails with a generic error toast: "Error! Something went wrong. Please try again."

2.7. Steps to Reproduce:

1.Go to Project Settings → Map Management → Locations → Manage Integrations (for "LA county - mani custom")

2.Observe the Speed Limit Integration section "area-145805" shows Status: Error

3.Click the trash/delete icon next to the errored entry

4.Observe the result

Actual Results

Delete action fails, producing a red error toast: "Error! Something went wrong. Please try again." The errored "area-145805" entry remains in the list, unable to be removed.

Expected Results

User should be able to delete a failed/errored integration entry to clear it and retry the upload, or the "Reupload" button should successfully resolve the error. Currently, both fail leaving the user stuck with a broken, unremovable integration entry.

Bug #2

2.1. Title: Release 2.6.7 - Overview Fails to Load Request Failed with Status Code 502

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: Server error 502 on Overview panel network health snapshot unavailable

2.7. Steps to Reproduce:

1. Opening the testing website
2. Tap on the Project
3. Tap on new project
4. Create Congestion Management project for Jax Beach
5. Observe the display
6. Tap on the Overview

Actual Results

Overview shows error message "Request failed with status code 502" no data loads

Expected Results

Overview panel should load and display network health and insights data

Bug #3

2.1. Title: Release 2.6.7 - Close (X) icon missing/invisible on Time Filters panel

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: No visible icon is shown, but hovering over the empty space reveals a tooltip ("Time Filter"), confirming an interactive element exists there without a visible icon

2.7. Steps to Reproduce:

1. Open Time Filter on Service Requests
2. Look at the top-right corner of the panel for a close icon
3. Hover the mouse over that empty area

Actual Results

No visible icon is shown, but hovering over the empty space reveals a tooltip ("Time Filter"), confirming an interactive element exists there without a visible icon

Expected Results

A visible X/close icon should appear in the top-right corner of the panel, allowing the user to close it

Bug #4

2.1. Title: Release 2.6.7 - Panels stack on top of each other in Manage Integrations, causing page to freeze

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: Panel stacking directly leads to the freeze same root issue, not two separate bugs. Worth confirming if a page refresh restores functionality.

2.7. Steps to Reproduce:

1. Go to Account and Tap Map→ Map Management
2. Open Manage Integrations for a location (e.g., Duval EG)
3. Click Reupload under Crash Integration
4. Observe multiple panels stacking behind the modal

Actual Results

Multiple panels stack on top of each other instead of replacing one another, and the page freezes, becoming unresponsive

Expected Results

Panel should open cleanly without stacking on top of previous panels; page should remain fully responsive

Bug #5

2.1. Title: Release 2.6.7 -"Export request view as image" fails with color parsing error

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: Error suggests a CSS color() function isn't supported by the export/image renderer. Worth checking if "Download CSV" export works fine for comparison.

2.7. Steps to Reproduce:

- 1.Go to Service Requests tab
- 2.Click the Share icon
- 3.Click "Export request view as image"

Actual Results

Export fails with error toast: "Failed to export service requests image Attempting to parse an unsupported color function 'color'"

Expected Results

The current service requests view should export/download as an image file

Bug #6

2.1. Title: Release 2.6.7 - Notification Badge Missing Until Bell Icon is Tapped

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: Tapping the download icon incorrectly displays raw code instead of initiating the file download process.

2.7. Steps to Reproduce:

1. Log into the staging application and view the main dashboard.
2. Observe the Bell icon in the top-right header (as shown in 1_2.jpg).
3. Tap on the Bell icon to open the notifications dropdown.
4. Observe the bell icon again once the panel opens (as shown in 2.jpg).

Actual Results

The bell icon appears completely empty initially (1_2.jpg). The red notification count badge ("28") only pops up after the user manually clicks the icon to reveal the panel (2.jpg).

Expected Results

If there are 28 unread notifications, the red badge containing the number "28" should automatically be visible on the bell icon before interaction, alerting the user to unread items.

Bug #7

2.1. Title: Release 2.6.7 - When user taps Point Buffer the whole page crashes and shows: "Uh-oh, route 404. This page is unavailable."

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: This crash happens specifically when clicking Point Buffer in the Selection panel on the dev environment (<https://dev.web.east.urbansdk.com>). Other selection tools like Route and Polygon do not cause this crash. This is a critical issue as it completely breaks the user flow.

2.7. Steps to Reproduce:

1. Go to Insights
2. Click Selection
3. Tap on the Point Buffer

Actual Results

The page crashes completely and shows a 404 error page "Uh-oh, route 404. This page is unavailable." The user is taken away from the Insights page entirely.

Expected Results

When the user clicks Point Buffer in the Selection panel, it should activate the Point Buffer tool and allow the user to drop a point on the map and draw a buffer area around it.

Bug #8

2.1. Title: Release 2.6.7 - Time Buffer tool causes a 404 page crash when clicked in the Selection panel

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: This is the same crash behavior as the Point Buffer bug. Both Point Buffer and Time Buffer tools in the Selection panel trigger a 404 page crash on the dev environment. Other tools like Route, Polygon, Box and Lasso work fine.

2.7. Steps to Reproduce:

Predefined action: User is in the Insight page

1. Go to Insights
2. Click Selection
3. Tap on the Time Buffer

Actual Results

The page crashes completely and shows a 404 error page "Uh-oh, route 404. This page is unavailable."

Expected Results

When user clicks Time Buffer it should activate the tool and allow the user to set a time-based buffer on the map.

Bug #9

2.1. Title: Release 2.6.7 - Create Account / Sign Up option is missing on the Login page

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Document page

2.6. Description: This was discovered after signing out. The Login page only shows Sign In options with no way for a new user to register.

2.7. Steps to Reproduce:

Predefined action: User is in the Sign in page

1. Opening the testing website
2. Tap on the profile icon
3. Tap on the Sign Out button

Actual Results

There is no Sign Up or Create Account option on the Login page. Only the Sign In button, Email, Password fields and Forgot Password link are visible.

Expected Results

The Login page should have a "Create Account" or "Sign Up" option so new users can register for an account.

Bug #10

2.1. Title: Release 2.6.7 - Error message appears when user tries to Update Legend after deleting and adding a new color step

1.2. Severity: Major

1.3. Browser: Chrome

1.5. Component/Module: Insights > Map Layers > Legend Style > Edit Legend / Edit Legend — Update Legend

2.6. Description: The last legend step label shows "Benjamin Bentil" instead of a speed range this may also be related to the error.

2.7. Steps to Reproduce:

Predefined action: User is in Insights page

1.Go to Insights

2. Click Map Layers
3. Click on Legend Style
4. Select a Legend color
5. Click Edit Legend
6. Delete one color step
7. Add a new color step
8. Click Update Legend

Actual Results

An error toast message appears in the top right corner saying "Error! Something went wrong. Please try again." The legend does not update.

Expected Results

The legend should update successfully and the changes should be saved and reflected on the map.
